

K&B DUCT's Air Tight Gates 'Cost Effective– Energy Savings'*

As Self Cleaning Manual

Half with Seal

As Automatic Gate

**K&B Duct believes in keeping things simple!
We also believe in investing in simplicity!
That is why we have developed the exclusive design for an
air tight* aluminum blast gate.**

These gates are made of cast aluminum. An exclusive recess in the gate halves, allow for the insertion of a high density (UHMW) plastic ring that presses against the blade when closed or against the opposing ring when open. A foam seal behind both plastic rings further secures the seal while providing the pressure to keep the rings tight against the blade or one another.

The gates are available in the popular sizes of 4", 6" and 8" for the immediate time being. They are available for use as manual gates in a self cleaning 'skeleton' gate style or in the popular pneumatically operated AutoAire.

***Special
Introductory
Pricing.***

4" Manual- \$122
Automatic- \$351

6" Manual- \$154
Automatic- \$390

8" Manual- \$188
Automatic- \$429

**At K&B Duct, we strive to provide high quality innovative solutions.
The air tight gate is just one. Call for information on other innovations.**

*The term Air Tight is not meant to imply 100% seal in ALL situations or ANY pressure, but to relate a high degree of seal.
